

# Master User Delete Restriction Implementation

---

## Overview

---

Implemented restriction so that **only the master user (fray@cdmsuite.com)** can delete leads from the CRM system. This ensures data protection and accountability for lead management.

## Changes Made

---

### 1. API Route Updates

#### `/app/api/crm/leads/[id]/route.ts`

- Updated DELETE endpoint to check if user email is exactly `fray@cdmsuite.com`
- Returns 403 error with clear message if non-master user attempts deletion
- Maintains audit logging for all deletions

#### `/app/api/crm/leads/bulk-delete/route.ts`

- Added master user check before processing bulk deletions
- Returns 403 error if non-master user attempts bulk delete
- Preserves existing cascade deletion logic for activities and sequences

### 2. UI Updates

#### `/app/dashboard/crm/page.tsx`

- **Individual Lead Delete Button:** Only shown when `session?.user?.email === 'fray@cdmsuite.com'`
- Located in lead detail dialog header
- Hidden for all other users including employees
- **Bulk Delete Button:** Only shown when `session?.user?.email === 'fray@cdmsuite.com'`
- Located in bulk actions toolbar
- Hidden when non-master users select leads

## Security Features

---

### Backend Protection

- ✓ API-level authentication check
- ✓ Session validation
- ✓ Email-specific permission check
- ✓ Clear error messages for unauthorized attempts
- ✓ Audit logging of all deletions

## Frontend Protection

- ✓ Conditional rendering of delete buttons
- ✓ UI elements hidden for non-master users
- ✓ Consistent permission checks across all delete actions

## User Experience

---

### Master User (fray@cdmsuite.com)

- Full delete capabilities (individual and bulk)
- Delete button visible in lead detail dialog
- Bulk delete button appears when leads are selected
- Confirmation dialogs before deletion
- Success/error notifications

### Other Employees

- All other CRM features fully accessible
- Can view, create, edit, and manage leads
- Can export leads
- Cannot delete leads (buttons hidden)
- No confusing error messages (UI prevents attempts)

### Non-Employee Users

- Standard CRM access based on role
- No delete capabilities
- No delete UI elements shown

## Testing

---

### Verified Functionality

- ✓ TypeScript compilation successful
- ✓ Production build successful
- ✓ Dev server starts without errors
- ✓ Delete buttons only visible to fray@cdmsuite.com
- ✓ API endpoints reject non-master users
- ✓ Other CRM features unaffected

## Implementation Date

---

October 28, 2025

## Status

---

- ✓ **Production Ready** - All tests passing, fully functional
- 

**Note:** If you need to grant delete access to additional users in the future, update the email check in both API routes and the UI component to include the new authorized emails.
